Datron Launches New Spectre M™ MULTI-BAND Tactical Handheld Radio

DSA, Booth 10472, Kuala Lumpur, Malaysia, April 16, 2018 – Datron World Communications, Inc. (www.dtwc.com), a leader in tactical military communications products, today announced the introduction of its new Spectre M™ HH3100 ruggedized tactical MULTI-BAND handheld radio. With the addition of the HH3100 Series to the Spectre family of tactical radios, secure and flexible network communications operating over the 30-512 MHz bands are now extended to dismounted soldiers across the theater of operations.

The HH3100 features embedded ECCM, COMSEC (AES-256), and GPS capabilities and meets MIL-STD-810G for reliable operation in harsh environments. Accurate position and time-of-day capability is afforded by the embedded GPS receiver, while frequency hopping and digital encryption waveforms offer a high level of jamming resistance and security. Extended frequency range and AM ground-to-air enables the user to effectively communicate with different support groups for efficient battleground coordination.

“The HH3100 provides our customers with increased frequency bands in a simple to use and rugged form factor that is designed for use in the harshest of environments,” said Art Barter, President and CEO of Datron. “It addresses today’s most pressing battlefield needs with a full range of embedded features, and is fully compatible with all encryption and hopping modes in our Spectre V family of products.”

The HH3100 handheld radio is backward compatible with any Datron VHF radio in encrypted modes allowing current users to add new capabilities without upgrading their existing inventory.

Datron will be showcasing the HH3100 at booth 10472 during DSA 2018 in Kuala Lumpur, Malaysia beginning Monday, April 16th.
