Datron Launches MT3100 Mount for the new HH3100 Multi-Band Radio

Special Operations Forces Exhibition (SOFEX), Amman Jordan, May 8, 2018 – Datron World Communications, Inc. (www.dtwc.com), a leader in tactical military communications products, today announced the introduction of its new MT3100 Mobile Mount for the recently introduced Spectre M™ HH3100 ruggedized tactical MULTI-BAND handheld radio. The addition of the HH3100 Series to the Spectre family of tactical radio products provides secure and flexible network communications in the 30 – 512 MHz bands; the new MT3100 mount/ dock extends this new capability to mobile and dismounted applications for soldiers across the theater of operations.

The MT3100 is a rugged MIL-STD-810G mount/ dock offering unique features for various mobile, base, and re-trans configurations. The patented detection feature offers true “Jerk and Run” for immediate mobile-to-handheld operations, eliminating the need to connect and disconnect any cables. Adding a spare battery charger ensures a fully charged backup battery is available at all times. With a wide operating voltage, Audio and Data I/O’s, and optional RF power amplifiers, the MT3100 and HH3100 radio offers scalable solutions to a variety of battlefield requirements.

“Datron is committed to providing our customers new products with features that they need in order to successfully operate in any environment. These new products allow the user to concentrate on the mission and not the technology,” said Art Barter, President and CEO of Datron. “Providing backward compatibility to Spectre V family of products is instrumental to our continued customer upgrade strategy.”

The HH3100 features embedded ECCM, COMSEC (AES-256), and GPS capabilities and meets MIL-STD-810G for reliable operation in harsh environments. Accurate position and time-of-day

capability is afforded by the embedded GPS receiver, while frequency hopping and digital encryption waveforms offer a high level of jamming resistance and security. Extended frequency range and AM ground-to-air enables the user to effectively communicate with different support groups for efficient battleground coordination. The HH3100 handheld radio is backward compatible with any Datron VHF radio in encrypted modes, allowing current users to add new capabilities without upgrading their existing inventory.

Datron will be showcasing the MT3100 and HH3100 at booth A611 during SOFEX 2018 in Amman, Jordan beginning Tuesday May 8, 2016.

About Datron World Communications, Inc.

Datron World Communications Inc. delivers communications products and systems worldwide. The company's offerings enable governments, security forces and commercial users worldwide to establish and maintain critical voice, data and video connectivity. Known for their ease-of-use and reliability, Datron's products and systems are currently deployed in over 80 countries worldwide. Datron World Communications Inc. was established in 1971 and is headquartered in San Diego, California, USA. For more information, visit: www.dtwc.com.
